

Gollete (HSE-G) — Investor Presentation

San Juan, Argentina | Epitermal SA
Fully Concealed, CSAMT-Ready Drill
Target
Environmental Permit Approved

EPITERMAL SA

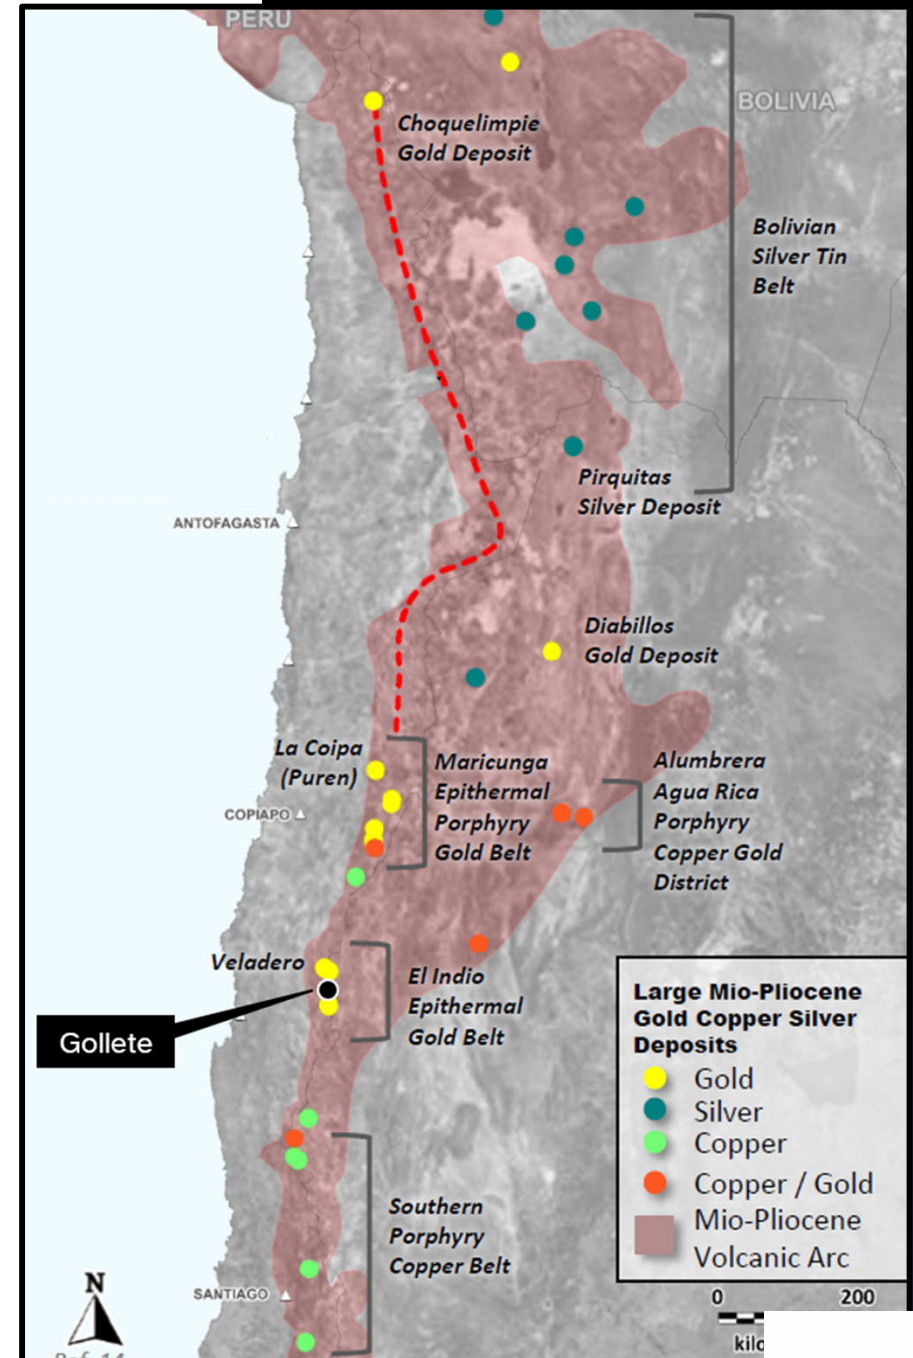

Epitermal SA — Leader in Grassroots Exploration

- Private exploration & services company operating in San Juan since 2014.
- Proven local expertise: logistics, permitting, and geology.
- Pipeline: 1 flagship project (Gollete) + 4 additional prospects (all undrilled).
- Open to JV partnerships with majors, juniors, or private investors.

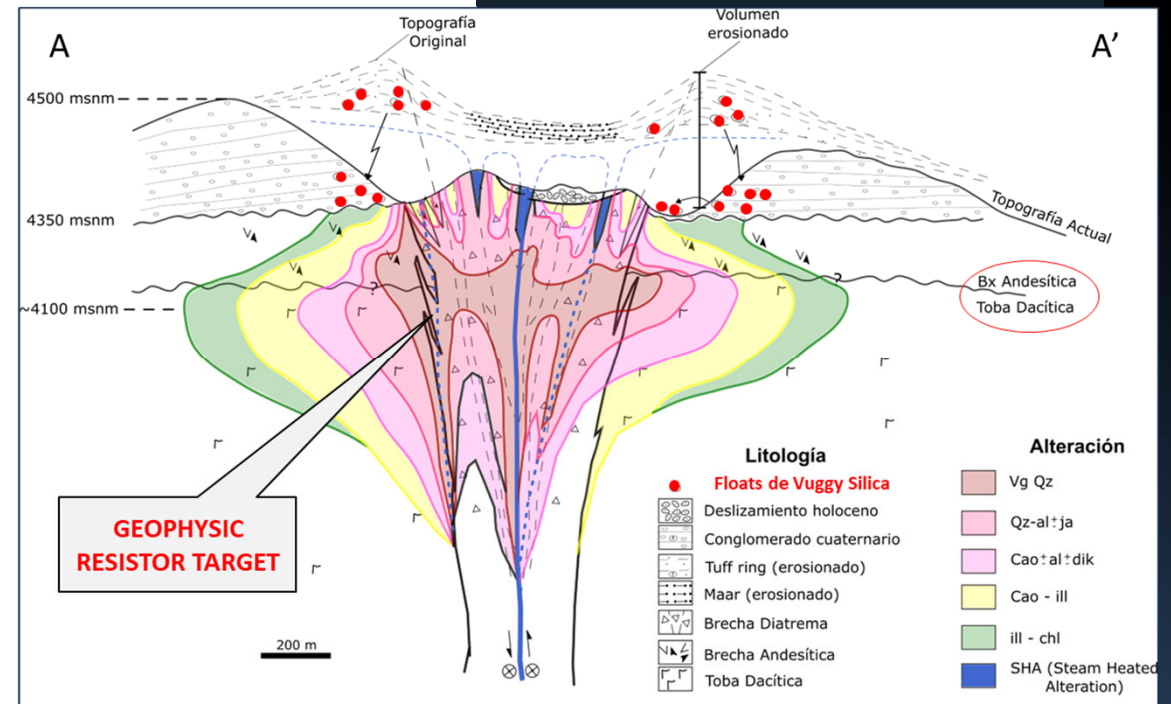

Strategic Location — Indio Belt

- Located in the prolific Indio Belt, host to >50 Moz Au in HSE-G deposits.
- Close analogues: Veladero (>15 Moz Au), Alturas (~6–9 Moz Au), Salares Norte (~5 Moz Au + 60 Moz Ag).
- Excellent access & infrastructure: year-round roads, nearby camp, water secured.
- District-scale opportunity: 27,200 ha consolidated property package.

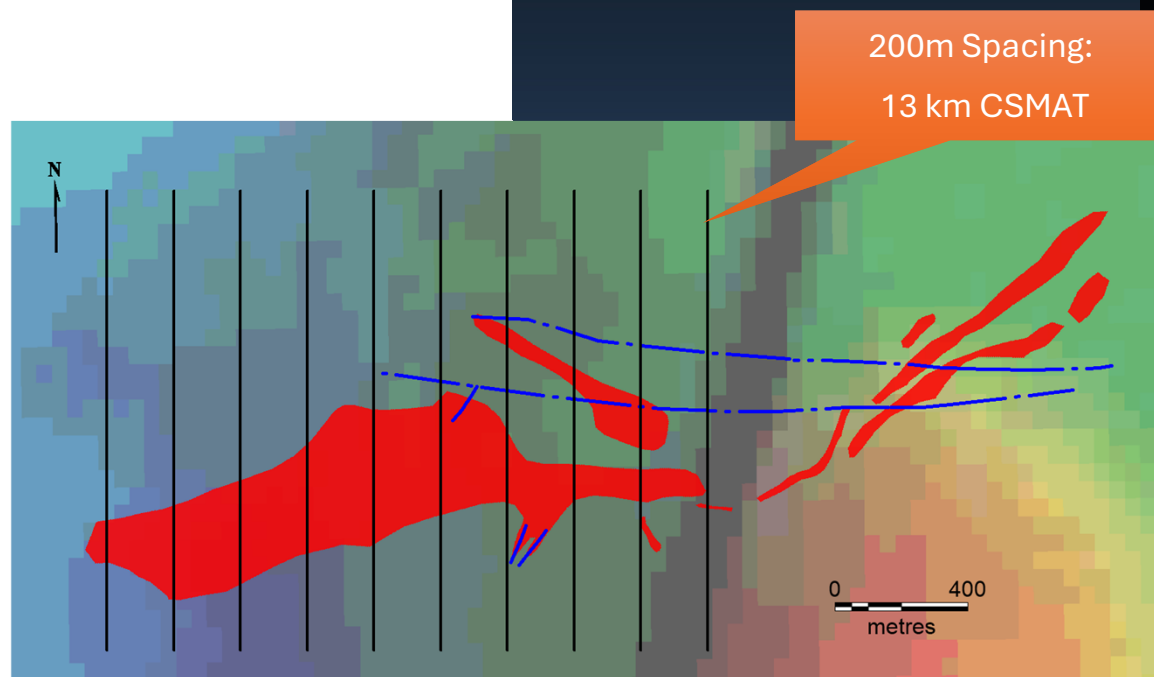

Geology & Deposit Model

- Maar-diatreme breccia with intense advanced argillic alteration (illite–chlorite $\pm$ kaolinite–alunite).
- System preserved at right erosional level; mineralization likely intact below shallow steam-heated cap.
- Age dating: Host andesite/dacite 18–23 Ma; maar-diatreme event 15.5–17 Ma (Ar-Ar pending).

Geophysics — CSAMT Program

- CSAMT is the preferred tool for covered HSE-G exploration.
- Strong correlation between 10k–4k ohm resistors and silica/vein systems.
- Planned survey: 13 km CSAMT @ 200 m spacing (Quantec).
- Estimated cost: US\$5k/day (~US\$65k total, off-shore crew).
- Logistics secured: Barrick camp available (US\$128 + taxes).

Work Plan 2025–2026 & Next Steps

Gollete Activity - Work Plan	2025												2026			
	January	February	March	April	May	June	July	August	September	October	November	December	January	February	March	April
Mapping, Terraspec and Sampling (1 Geo mas 1 Assistant)																
Dating Alteration event and Host Rock																
Access Building D8																
Interpretation of Geology/Alteration Map, min event, Geochemistry review etc																
CSMAT Geofisics 5km to 15km																
Soil Sampling?, Trenches																
Drilling 1000m to 3000m? if Geophysics shows resistor																
JV with possible investor
